

GET READY FOR THE NEW PRINT MARKET SITUATION

PUR binding and hard cover finishing will give you a competitive edge in this new printing market. Here are the reasons why.

The existing trend towards smaller volumes is accelerating.

Customers demand the highest quality for their orders. This means more difficult and heavy papers with longer print time and higher printing costs. Such expensive content demands the best possible finishing: a personalized hard cover and professional PUR glue binding.

Fastbind finishing solutions are the perfect answer to these three market needs: on-demand and ultra-short runs, highest finishing quality and hard cover binding.

Designed for shorter runs

The binding speed is not the focus of the commercial printers anymore when choosing a finishing machine. Their priority is the ability to accept multiple short-run orders.

With Fastbind perfect binders, there is no set up time between jobs, whatever the format or thickness of the books, which means no production delays between orders.

Highest quality

Fastbind perfect binders offer the strongest binding results with soft and hard covers. The innovative Fastbind Pureva line allows both PUR and EVA glue binding with a quick switch between them for non-stop production.

Hard cover finishing

Fastbind also offers several case makers to produce personalized hard covers for books, ring binders etc. All offer the same benefits as the perfect binders: no set-up time between jobs, small footprint, ease of use with fast training of the operators, quick return on investment... All Fastbind systems are ideal for medium, short and ultra-short runs.

SPECIAL OFFER MARCH 2021: SMART AUTOMATION PACKAGE

Fastbind Pureva Smart & Casematic Smart a46a: Ask for your special price

The Fastbind Pureva Smart offers a compact and versatile all-in-one solution for high quality PUR and EVA production, for all binding needs. Thanks to its semi-automated system, the Pureva Smart easily produces both soft and hard cover books. The operator can use the pre-set or create their own custom programs. The switch between glue types (EVA or PUR) takes only seconds and the automated PUR cleaning is accomplished in minutes.

The Fastbind Casematic Smart a46a is the first semi-automatic Fastbind case maker. The actions found in the present Casematic range have been automated. These include: vacuum table, back-light viewing area, spine guide positioning setup, air bed and edge folder. Designed for small to extra-large format hard covers, you can produce cases from under A6 to over 45 x 45 cm in less than one minute with no set-up time. You can make many different hard covers including book covers, ring binders, luxury cases, wall art or photo album covers.

You get all this:

- Fastbind PUREVA Smart
- Fastbind Casematic Smart a46a with a stand, corner cutter, spacers and side guides
- Supplies for 150 covers
- All accessories
- PUR and EVA Glue
